Project Description

This is a house services application where service professionals can create an account and offer their services. Customers can buy services of these professionals and admin can manage both the customers and professionals.

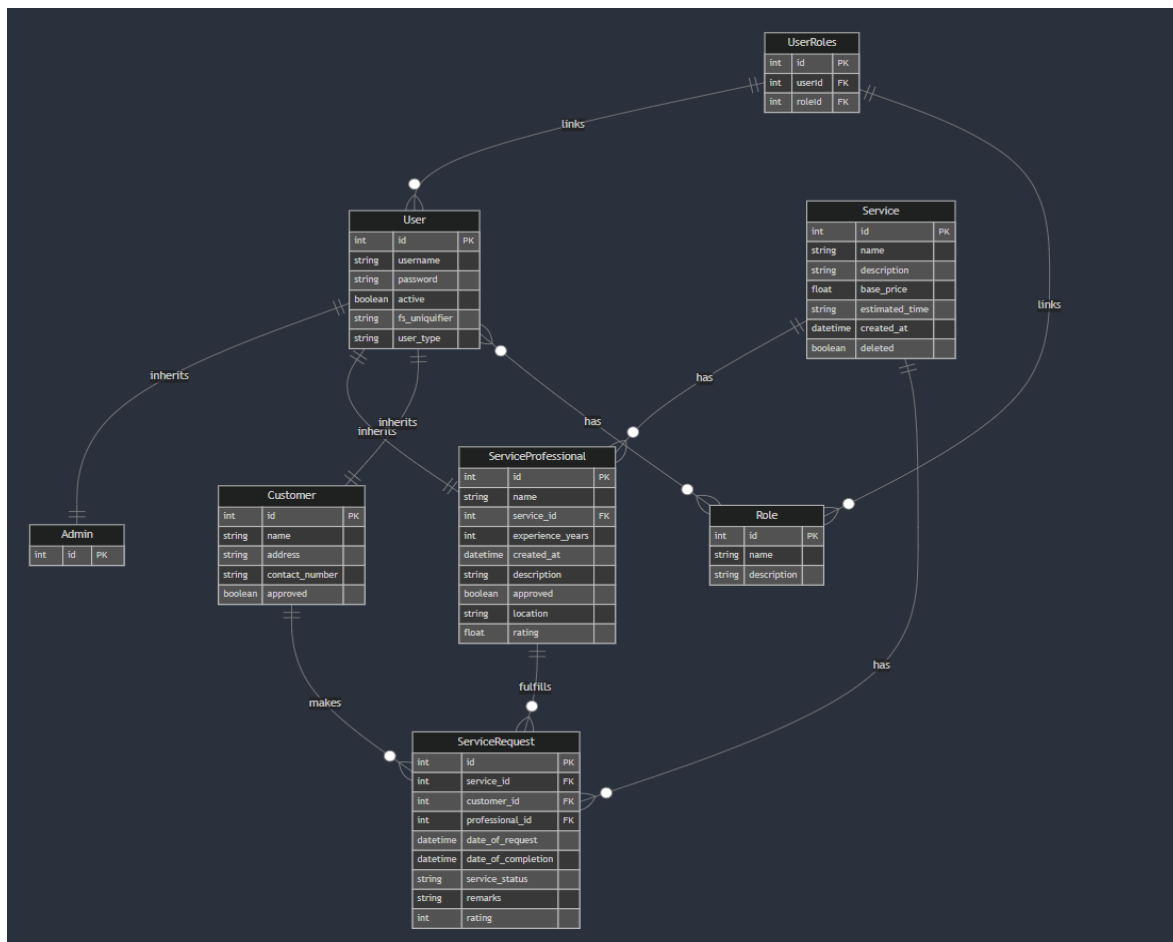

Technologies Used

Flask - for backend
Flask-SQLAlchemy - for ORM
Flask-Excel - for creating csv files
Flask-Security-Too - for authentication and authorization
Flask-Cache - for caching
Vue 2 - for frontend
SQLite 3 - for database
Redis - for message broker
Celery - for backend jobs
Bootstrap - for styling

APIs

`/` - Main homepage render
`/protected` - Protected route accessible only to authenticated users
`/login` - User login endpoint
`/admin/login` - Admin-specific login endpoint
`/customer/register` - Register new customer
`/professional/register` - Register new service professional
`/admin/service/new` - Create new service
`/admin/service/edit/<service\_id>` - Edit existing service
`/admin/service/delete/<service\_id>` - Delete service
`/admin/professional/approve/<professional\_id>` - Approve service professional
`/admin/service-professional/block-or-approve/<service\_professional\_id>` - Toggle professional block/approve
`/admin/customer/block-or-approve/<customer\_id>` - Toggle customer block/approve
